

การแถลงสรุปผลโครงการวิจัยเพื่อเมืองไทยไร้อุบัติเหตุ

The Summary of Research Finding In-depth Accident Investigation in Thailand

Thailand Accident Research Center (TARC)
Asian Institute of Technology (AIT)
4 March 2021

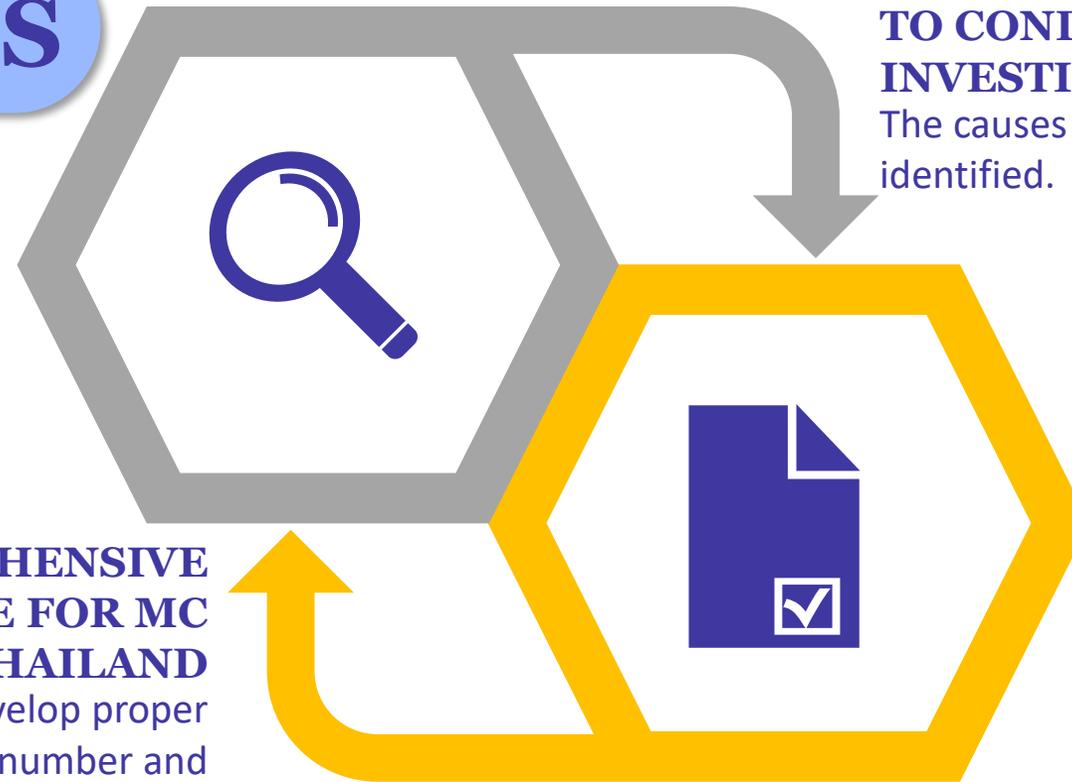

OBJECTIVES

TO CONDUCT IN-DEPTH MC ACCIDENT INVESTIGATION

The causes and consequences of MC accidents are identified.

TO MAINTAIN COMPREHENSIVE AND RELIABLE DATABASE FOR MC ACCIDENT IN THAILAND

The data then can be used to develop proper countermeasures to reduce the number and severity of MC accidents in Thailand.

What is Accident Investigation?

- **Accident investigation** is to determine the causes of crashes and to answer "what happened and how to prevent the recurrence of those types of accident?"
- How to do the investigation
“**Inspection of crash site and gathering evidences in all contributing factors related to crashes (human factors, vehicles, and road and environment)**”

Case Control Conditions

>60%	MC vs Car Crashes
>30%	MC Fatal Crashes (AIS \geq 3)
>10%	MC Single Crashes
>10%	MC vs Other Vehicle Crashes

MOTORCYCLE ACCIDENT INVESTIGATION PROCESS

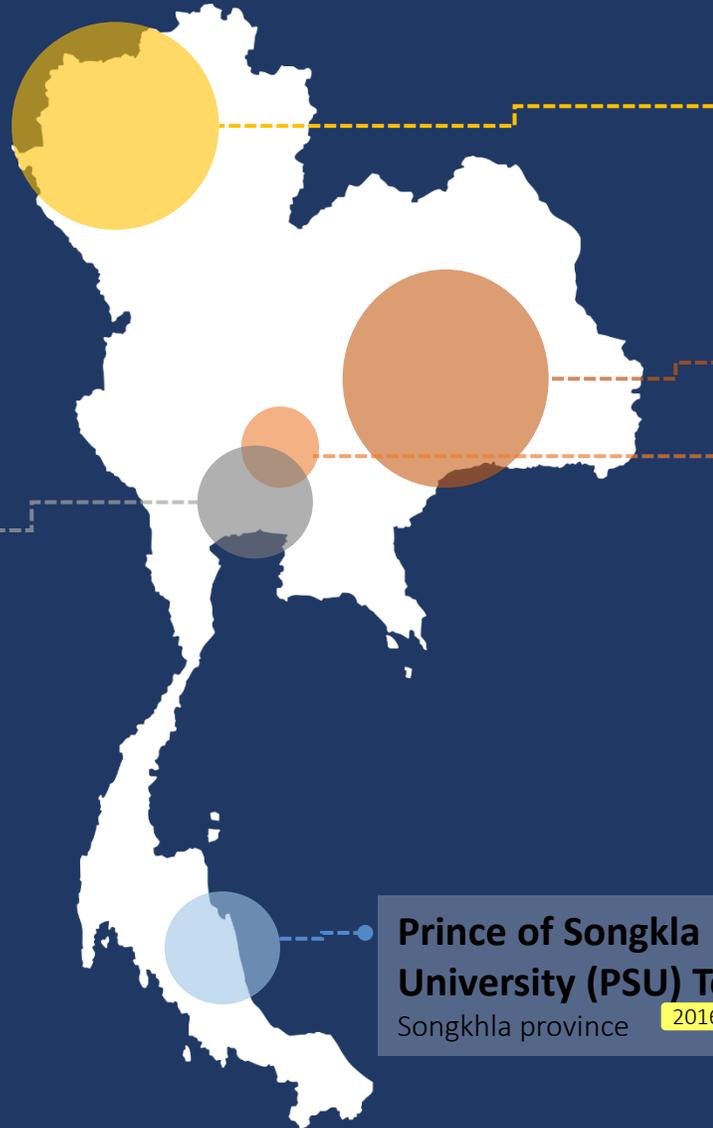

MOTORCYCLE ACCIDENT INVESTIGATION TEAM

King Mongkut University Thonburi (KMUTT) Team

2018-2020

- Bangkok province
- Central Region
- Total area is about 1,568.7 km^2 with 50 districts
- Population is about 8,280,925
- Samut Sakhon province
- Central Region
- Distance is 48 km from Bangkok
- Total area is about 872.35 km^2 with 3 districts
- Population is about 491,887
- Samut Prakarn province
- Central Region
- Distance is 25 km from Bangkok
- Total area is about 1,004.1 km^2 with 3 districts
- Population is about 1,310,766

Chiang Mai University (CMU) Team

2016-2020

- Chiang Mai province
- Northern Region
- Distance is 685 km from Bangkok
- Total area is about 20,107 km^2 with 25 districts
- Population is about 1,700,000

Suranaree University (SUT) Team

2016-2020

- Nakhon Ratchasima province
- North Eastern Region
- Distance is 260 km^2 from Bangkok
- Total area is about 20,494 km^2 with 32 districts
- Population is about 2,700,000

Asian Institute of Technology (AIT) Team

2016-2020

- Pathum Thani province
- Central Region
- Distance is 40 km from Bangkok
- Total area is about 1,525 km^2 with 7 districts
- Population is about 1,000,000
- Ayutthaya province
- Central Region
- Distance is 80 km from Bangkok
- Total area is about 2,556 km^2 with 16 districts
- Population is about 800,000

Prince of Songkla University (PSU) Team

2016-2018

Songkhla province

RESULTS AND ANALYSIS

**DATA COLLECTION
FROM 2016 - 2020**

Total Number of MC Accident Cases Collected

Team	Phase I	Phase II	Phase III	Phase IV	Total
	2016-2017	2018	2019	2020	
AIT Team	76	45	41	28	190
CMU Team	85	54	64	48	251
SUT Team	94	54	64	48	260
PSU Team	85	49	-	-	134
KMUTT Team	-	54	64	48	166
Total	340	256	233	172	1001

DATA COLLECTION FROM 2016 - 2020

Total 1,001 cases

**NON-FATAL CRASHES
732 cases**

**27% FATAL CRASHES
269 cases**

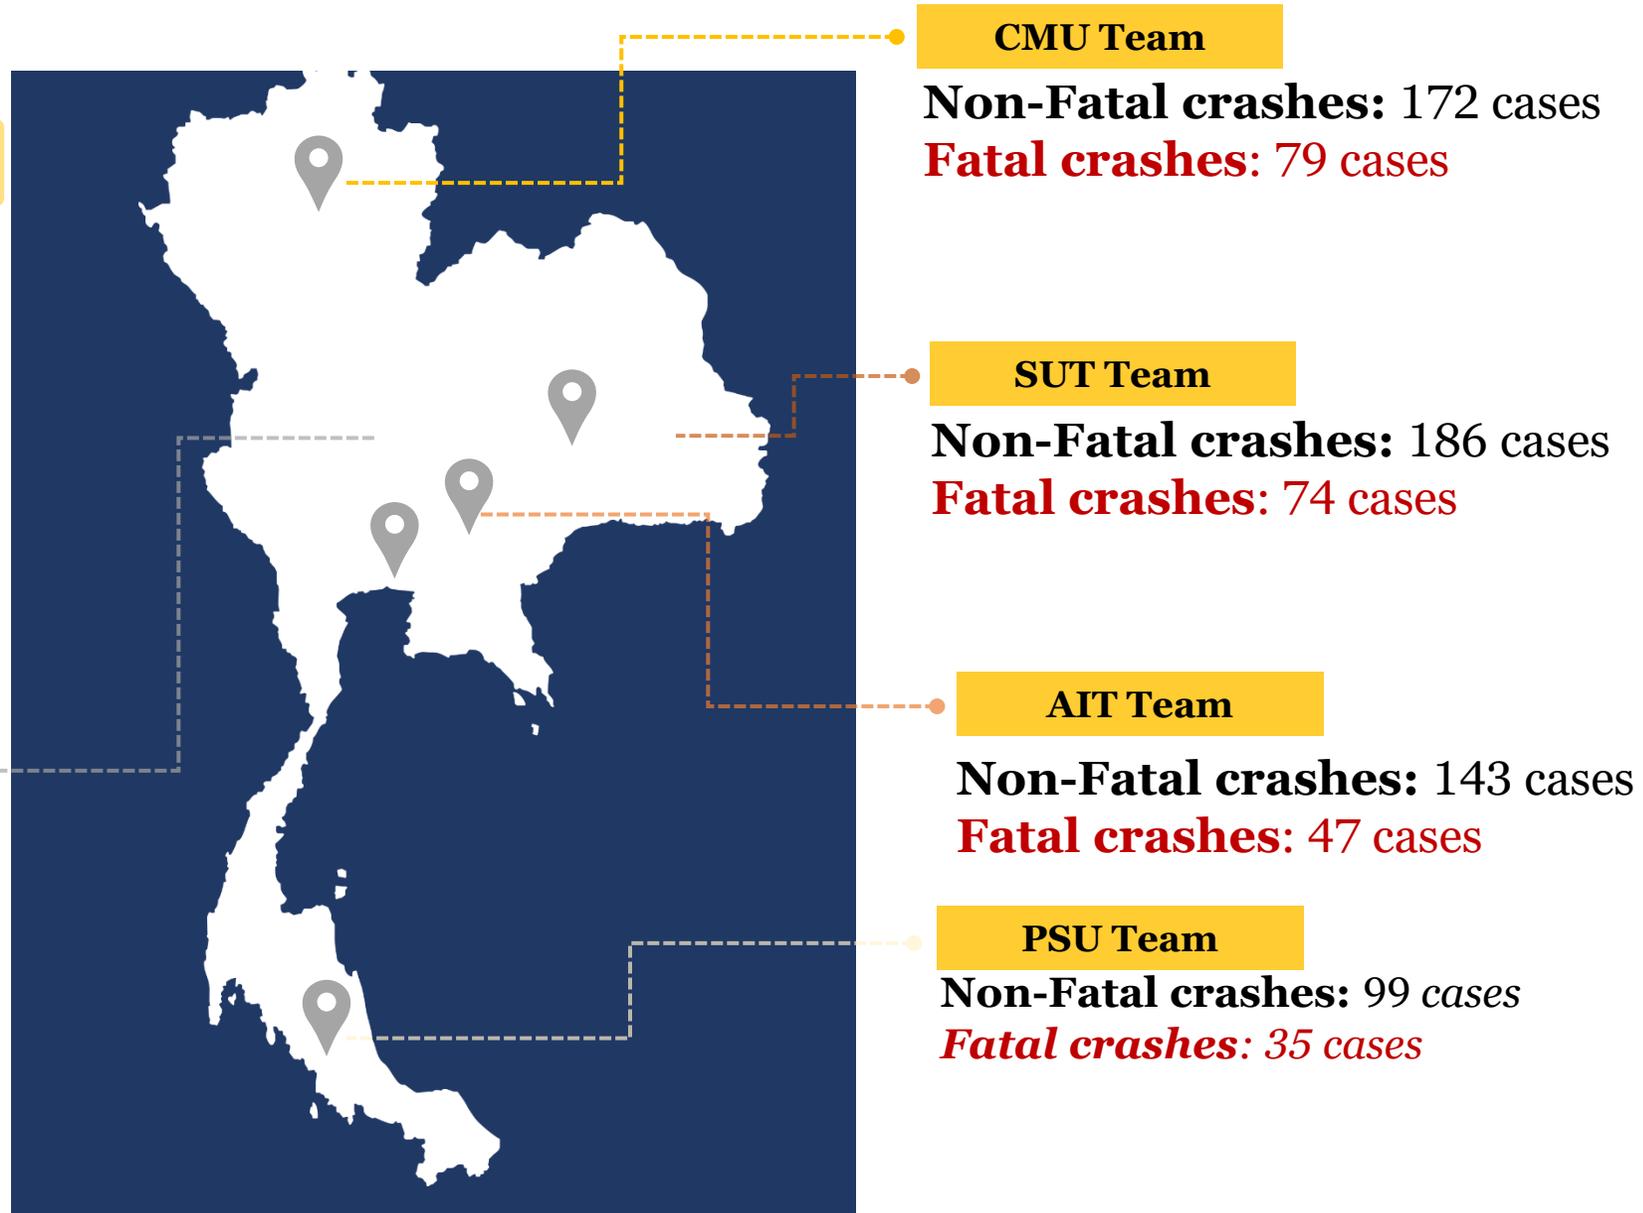

KMUTT Team

**Non-Fatal crashes: 132 cases
Fatal crashes: 34 cases**

Case Control Conditions

>60%	MC vs Car Crashes
>30%	MC Fatal Crashes (AIS>=3)
>10%	MC Single Crashes
>10%	MC vs Other Vehicle Crashes

Number of Fatal Cases and Non-Fatal Cases

VEHICLE

COLLISION DYNAMICS

Comparison of MC Travelling Speed for Fatal and Non-Fatal Cases (all accidents)

- The greatest percentage of MC travelling speeds were between 50 km/h and 60km/h.
- fatal crashes are more likely to occur when the speed increases up to 100 km/h.

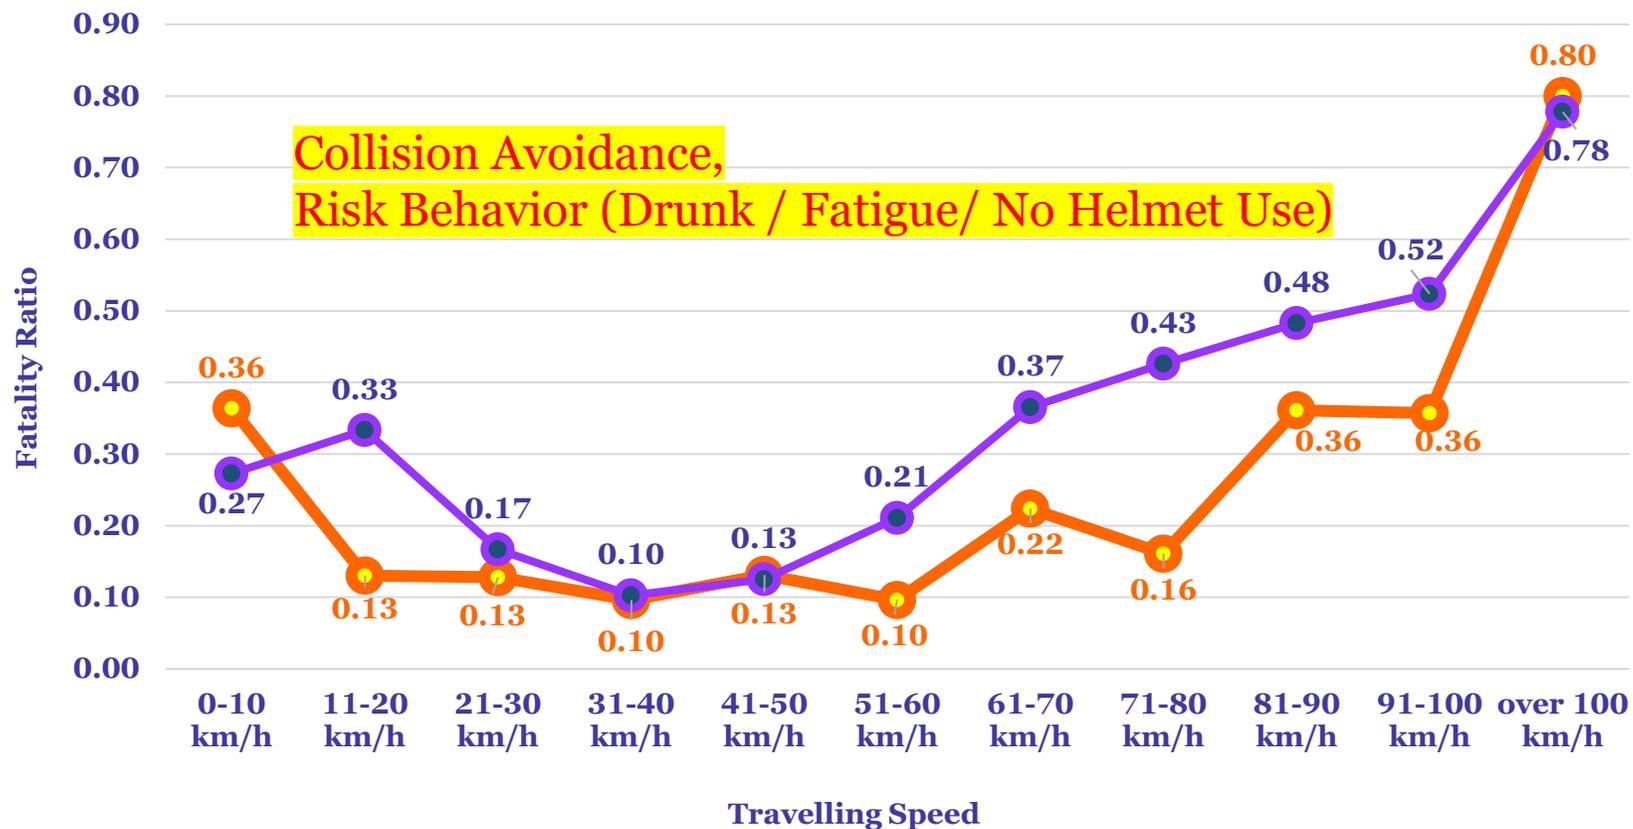

VEHICLE

COLLISION DYNAMICS

Comparison of MC Travelling Speed for Fatal and Non-Fatal Cases (all accidents)

Collision Avoidance, Risk Behavior (Drunk / Fatigue / No Helmet Use)

- Fatality ratio at nighttime tends to be higher than at daytime.
- fatal crashes are more likely to occur when the speed increases from 80 km/h.

Recommended Countermeasures and Policies

RIDER TRAINING

- Improve the contents of safe riding training by focusing on **Risk Perception, Defensive driving, and Collision Avoidance Skill**. (make the risk perception/collision avoidance skills to be well known by road safety trainer)
- Train of the trainer/instructors.
- Encourage other NGOs/Private organizations to include the abovementioned contents in their training courses.
- Riding training courses in schools/universities should be proposed as selective courses.

DRIVER LICENSES

- Need to pass **riding training courses** before license examination
- **Accident Prediction** should be included in the examination
- Improve the process of practical license examination
- Need to attend **safe riding training courses** (w/ accident prediction contents) for those who are **renewing licenses.**

ENFORCEMENT

- Strict enforcement and record keeping for **traffic violations**
- Strong regulation and enforcement for **illegal parked vehicles on all highways** especially for large trucks. They should be required to install high reflection signs at the rear-end of all large trucks.
- Strong regulation and enforcement for **modified motorcycle**
- Speeding enforcement (Max. 80 km/hr for MC)
- Speeding enforcement for cars and large trucks
- Improving crash database by police
- Strong enforcement for helmet wearing
- Strong enforcement for drunk driving

ROAD INFRASTRUCTURE

- Promote more on **traffic calming to reduce car speed** in villages/urban areas
- Implement more **infrastructures to reduce conflicts** between MC and Cars
- Improve and control **road access**
- Improve **sight distance** at intersection and access
- Support **policies to reduce conflicts on highways** especially at U-turn sections.
- Design **safe turning lanes**

VEHICLE

- Study the **safety devices for frontal impacts**
- Study the **safety devices to prevent rear-end collision**
- Study the **efficiency of MC light beam** whether it is long enough for visibility at nighttime or not.

RESTRAINT SYSTEM

- Continually promote the **use of helmet** especially in risk groups.
- Implement new technology for helmet enforcement
